“We have witnessed what can happen when community members come together to collaborate”

Rob Acker
CEO, Salesforce.org

Salesforce.org is proud to participate whenever and wherever we see an opportunity for technology to contribute to society. We believe that technology, when used for social good, can have a profound impact on the world.

This past year, we have been encouraged by the innovative ways our global community of more than 50,000 nonprofit organizations and educational institutions – and the volunteers, donors, and partners that support their work – has leveraged technology to meet the many challenges we are all facing. We’ve witnessed what can happen when community members come together to collaborate on problems, ideas, and solutions.

I am so proud of how our community has risen to meet this moment. It’s clear that the organizations and institutions we serve – and the millions of people they serve every day – have the resilience to adapt to the ebbs and flows of this unpredictable environment.

This year’s Community Impact Report highlights how our community is using technology to inspire action. This past year, Salesforce.org’s Annual Social Value – the sum of the value of our product donations and discounts as well as the pro bono technical support provided by Salesforce employees around the world – increased to $1.45 billion from $1 billion in 2020.

In this report, you will see how those numbers translate to real-world impact. Our technology donations have helped 87% of our community members improve their ability to achieve their missions. Of customers who completed pro bono projects, 94% report that they are better able to leverage their Salesforce tools to drive impact.

This year’s report also highlights the work done by Impact Labs, our groundbreaking program to co-design innovative technology solutions that address our toughest social issues. Our first two Impact Labs cohorts focused on people experiencing homelessness and students struggling to navigate the financial aid process. Our third cohort is now working to co-design a technology solution to support marginalized communities most impacted by the climate crisis.

The challenges we face are a reminder that it’s always the right time to talk about change and innovation and to focus on new ways to work together. We still have a long way to go, but I know that our community, powered by technology, is working every day to create a better world for all of us in 2022 and beyond.
At Salesforce, we believe business is a powerful platform for change, and to achieve intentional change, we must understand the full scale of our work. To this end, we have created a standard methodology to quantify and report on the total annual contributions of Salesforce.org that is transparent, reperformable, and verifiable.

With this methodology, we are able to quantify the total monetary contribution of our technology and employee pro bono services.

Our methodology is based on a framework from McPherson Strategies, feedback from Salesforce’s Finance and Revenue Recognition teams, and input from the valuation and technical accounting advisory practices of a leading professional services firm.

Fiscal 21 represents the fiscal year ended January 31, 2021.

Product Donation Value: Salesforce calculates the social value of products sold or donated based on the estimated price Salesforce would have received if a comparable product was sold to a for-profit business of similar size and location, less the price that Salesforce received, if any, for the same product from a qualified non-profit, educational institution or other NGO. When a comparable Salesforce product price is not readily available, a ratio of the weighted average of the Salesforce price to a for-profit company compared to Salesforce price to a non-profit company is used to estimate the social value. This figure is reviewed by Ernst & Young. See Methodology for details.

Pro Bono Value: The skills based pro-bono volunteering value represents the value of self reported hours donated by Salesforce employees to non-profits to help them implement Salesforce solutions and support the professional capacity of the organization. Salesforce calculates this value by multiplying the number of pro bono hours volunteered by Salesforce employees by the estimated billing rate of $195 per hour per as recommended in the CECP 2020 valuation guide. This figure is not currently reviewed by Ernst & Young. See methodology for details.
Our Approach to Impact

**Technology**

We accelerate social impact with purpose-built technology.

**Community**

We convene, connect, listen to and learn from the community to co-create a better future.

**Partnership**

We build social innovation capacity through partner services, pro bono and impact-led partnerships.

**If** we empower change makers with powerful technology built for and with our community

**Then** their organizations can innovate how they operate, raise funds and connect

**And** the social sector will maximize its impact

Together, we will create a more just, equitable, sustainable planet
Salesforce has helped our customers streamline their processes

“To be able to get that data without having to open, you know, seven years worth of ginormous Excel files, is huge.”

Medium Size Education Customer

“It allows folks to focus on what’s most important and focus on the work.”

Small Nonprofit Customer

“I think marketing campaigns are much easier because we can pull data from Salesforce we’re now reaching and we’re not having to reach the professionals to get changed that ultimately define what a major impact is on children.”

Large Education Customer

“Our customers can focus on their impact

I think marketing campaigns are much easier because we can pull data from Salesforce and having the legislative database, we have strategies that ultimately define what a major impact is on children.”

Large Nonprofit Customer

A majority of customers continue to improve their communication, both inside and out.

“[Salesforce has] helped foster those conversations across the programs so that we recognize that our different programs use similar information to do their work.”

Small Education Customer

“... over COVID when all we could do last summer during lockdown was contact kids and their families. It was incredibly useful because we could keep track of them and follow up in a very strategic way... We could look and say ‘ok and figure out what we could...”

Small Nonprofit Customer

Our customers are improving in their ability to measure their impact and create a culture of data and learning

“...it’s about being able to make data-driven decisions, being able to look at your data from the past or your performance from the past and easily use that as a measure, whether that’s to track your progress currently or for future planning.”

Qualitative data gathered through Customer Impact Interviews January 2021 to March 2021
Our entire ecosystem, from customers to employees, feel like they’re part of a community working on achieving positive social impact.

“I’m very passionate about the Salesforce platform. I think Salesforce has been an incredible partner to the college. I think what they’re doing in the community college space, what they’re doing to really fight the challenge of systemic racism and really help underrepresented minorities in the country. They’re very much aligned with our mission.”

Small Education Customer

“Get out of the community what you put into it, that’s why I believe it’s so important to contribute. Not only are you able to get and give support and answers, but you end up building an incredibly valuable network of colleagues and even friends!”

Salesforce.org MVP

Impact Labs

Salesforce.org Impact Labs is a collaborative program to co-design innovative technology solutions that address the toughest social issues facing us today.

“The Impact Lab allowed me to connect with diverse peers from across the postsecondary success field who care deeply about equitable outcomes for students. Each of us brought different experiences, but we all centered our work on the end user: students. This led us to innovate how we thought about technology and data to build a solution that truly meets the needs of young people today.”

Impact Labs Community Fellow

Open Source Commons

Collaboration to address the unique needs of the nonprofit & education communities as they tackle the world’s most challenging problems.

“Tou have never seen so many people actively engaged and on-camera on Zoom. The Virtual Community Sprint is an example of how our world is changing and adapting and how we can successfully use technology to keep creating and solving problems for our communities.”

Community Sprint Attendee
Our customers and our employees continue to benefit from our Pro Bono program and Global Partnerships.

**Pro Bono Program**

Through the Pro Bono Program, customers can access digital expertise of Salesforce employees on short-term projects – at no cost.

"I can’t say enough about how helpful the Pro Bono Program has been. We’re just starting the journey but have a clear roadmap of where we want to be in the future”

Customers report using a partner/consultant to build, expand or enhance their instance

"I can’t say enough … having [Consultant] to come alongside, that is gracious and is able to provide wisdom and insight and is very generous with [their] time and gifts.”

Small Nonprofit

All data points reflect the Fiscal Year 2021 unless otherwise noted.
The Salesforce.org Community Impact Report celebrates the strides that Salesforce.org stakeholders are making to advance social impact. Working with our stakeholders, we’ve identified outcomes across our three primary portfolios: Technology, Capacity, and Community. Salesforce.org’s Measurement & Evaluation (M&E) team employs a variety of data collection and analysis methods to determine our social impact. We will describe our processes section-by-section.

OUR APPROACH TO IMPACT

To develop our current value proposition, theory of impact, approach, and logic model, the Salesforce.org M&E team met with internal stakeholders from across the organization to determine the appropriate outcomes and intended impact. This report covers Salesforce.org’s 2021 Stakeholder Impact Report.

SOCIAL VALUE

Salesforce.org aims to capture the totality of financial contributions to the social sector in a transparent, replicable and consistent way. The methodology for the Social Value Calculation is based on feedback from McPherson Strategies, Salesforce Finance Team and Salesforce Revenue Recognition team and input from the valuation and technical accounting advisory practices of a leading professional services firm. Salesforce.org’s Social Value is made up of the value of employee pro bono services (valued at $195/hour, sourced from CECP) and the value of technology donation and discount.

The Social Value Calculation is based on feedback from McPherson Strategies, Salesforce Finance Team and Salesforce Revenue Recognition team and input from the valuation and technical accounting advisory practices of a leading professional services firm.

Technology Donation and Discount is made up of the value of Salesforce products resold by Salesforce.org at a significant discount, the value of the 10 free products resold by Salesforce.org to education institutions under the Power of Us program, and the value of pre-configured customization packages offered to the social sector free of charge (i.e. Nonprofit Success Pack, Education Data Architecture). The value of products sold or donated is based on the estimated price Salesforce would have received if a comparable product was sold to a for-profit company to a comparable company. The value is used to estimate the social value.

The Salesforce.org Social Value incorporates the total value of all traditional philanthropic giving in the form of grants and employee giving, the value of employee pro bono services, the value of employee volunteering (valued at $25.43/hour, sourced from Independent Sector) and the value of technology donation and discount. The value of Salesforce.org Technology Donation and Discount is made up of the value of Salesforce products resold by Salesforce.org at a significant discount, the value of the 10 free products resold by Salesforce.org to education institutions under the Power of Us program, and the value of pre-configured customization packages offered to the social sector free of charge (i.e. Nonprofit Success Pack, Education Data Architecture). The value of products sold or donated is based on the estimated price Salesforce would have received if a comparable product was sold to a for-profit company to a comparable company. The value is used to estimate the social value.

SOCIALIMPACT@SALESFORCE.COM

TECHNOLOGY, COMMUNITY & PARTNERSHIPS

In order to understand Salesforce.org’s progress on outcomes, it is essential to hear directly from customers. While our 2018 and 2019 Social Impact Reports shared data from the annual Salesforce.org Voice of the Customer Survey, since 2020 we have used the Org Customer Outcomes Survey (Previously named the Technology for Social Change Survey) to collect data for reporting. The OCOS is tied directly to our impact framework and leverages impact measurement best practices. While some questions from the Salesforce.org Voice of the Customer Survey are similar to the OCOS, we made significant changes to methodology and sampling in the OCOS, and the new baseline year for Salesforce.org’s impact measurement data is 2020.

Each quarter in 2021, the Salesforce.org M&E administered the Org Customer Outcomes Survey (n=282), to learn about progress on customer outcomes, about how Salesforce is supporting customer organizations in meeting their missions, and where we can grow. Tableau and Microsoft Excel were used for quantitative and qualitative data analysis respectively.

In addition to the Tech for Social Change Survey, between January 2021 - March 2021, we conducted Customer Impact Interviews (n = 35). In these interviews, customers were asked about how the use of Salesforce contributes to their efficiency, effectiveness, community connection, and innovation.

To ensure a representative sample, we stratified by organization size, geographic location, product vertical, and level of engagement. Interviews were recorded, transcribed, anonymized, and then analyzed in Microsoft Excel to extract common themes. The final sample of participating organizations and interviewees was kept confidential, and not shared outside of the M&E team.

Ultimately, we interviewed representatives from 35 organizations across the Nonprofit, K-12, and Higher Education verticals (compared to 55 the previous year).
